

## Sets

$A$  Activities  $\{1, \dots, |A|\}$

$A^r \subseteq A$  Recurring activities

$A^o \subseteq A$  one-off activities

$T$  Time periods in month  $\{1, \dots, 2880\}$

$T^{bus}$  Time periods which fall in business hours

$T^{off} = T \setminus T^{bus}$

$T^r$  Time periods for recurring activities  $\{1, \dots, 32\}$

$T^o$  Time periods for one-off activities  $\{1, \dots, 96\}$

$D^r$  Days of week  $\{1, \dots, 5\}$

$D^o$  Days of month  $\{1, \dots, 30\}$

$K_a$  set of feasible schedules for class  $a \in A$

## Data

$n^{small}$   
 $n^{large}$

} # small/large rooms available

$p_t^{base}$

base load @ time  $t \in T$

$p_t^{solar}$

solar supply @ time  $t \in T$

$price_t$

grid price @ time  $t \in T$

$\left. \begin{array}{l} \text{small } a_{dt}^k \\ \text{large } a_{dt}^k \end{array} \right\} \dots$

Value  $a^k \dots$

$P_{adt}^k$  power consumption class  $a \in A$  at  $t \in T^{o/r}$   
 in schedule  $k \in K_a$

$\text{prec}_a^k$  set of tuples  $(a, k) \in A \times K_a$

$\text{active}_{at}^r$  set of active schedules  $(a, k) \in A^r \times K_a$   
 at  $d \in D^r, t \in T^r$

$\text{active}_{dt}^o \dots$

$G_{ad}^{r/o}$  set of active schedules  $k \in K_a$  for  $a \in A^{r/o}, d \in D^{r/o}$

## Functions

$T2Tr(T)$  Map a subset of  $T$  to the corresponding  
 $(d, t) \in D^r \times T^r$  pairs used to index  
 recurring activities

$T2To(T)$  " where  $(d, t) \in D^o \times T^o$

# Variables

$\xi_a^k \in \{0,1\}$  | if schedule  $k \in K_a$  is chosen

$p_t^{\text{grid}}$

grid supply @ time  $t \in T$

$p_t^{\text{class}}$

$p_t$

## Objective

$$\min \sum_{t \in T} \frac{0.25}{1000} p_t^{\text{grid}} \cdot \text{price}_t + 0.05 \left( \max_t p_t^{\text{grid}} \right)^2$$

$$- \sum_{\substack{a \in A^0 \\ k \in K_a}} \xi_a^k \text{value}_a^k$$

ignore for now

## Constraints

$$\sum_{k \in K_a} \varepsilon_a^k = 1$$

$$\forall a \in A^r$$

$$\sum_{k \in K_a} \varepsilon_a^k \leq 1$$

$$\forall a \in A^o$$

Classrooms available

$$\mathbb{I}((d^r, t^r) \in T^r) \sum_{\substack{a \in A^r \\ k \in K_a}} \varepsilon_a^k \cdot \text{small}_{ad^r t^r}^k \dots$$

$$+ \sum_{\substack{a \in A^o \\ k \in K_a}} \varepsilon_a^k \text{small}_{ad^o t^o}^k \leq n^{\text{small}} \quad \forall t \in T \text{ with mappings}$$

$$(d^r, t^r) = T^2 T^r(t)$$

$$(d^o, t^o) = T^2 T^o(t)$$

Same for large rooms

Power demand from classes

$$\mathbb{I}((d^r, t^r) \in T^r) \sum_{\substack{a \in A^r \\ k \in K_a}} \varepsilon_a^k \cdot p_{ad^r t^r}^h (\text{small}_{ad^r t^r}^k + \text{large}_{ad^r t^r}^k)$$

$$+ \sum_{\substack{a \in A^o \\ k \in K_a}} \varepsilon_a^k p_{ad^o t^o}^k (\text{small}_{ad^o t^o}^k + \text{large}_{ad^o t^o}^k) = p_t^{\text{class}}$$

$$\forall t \in T \text{ with mappings}$$

...

Match supply and demand

$$p_t^{\text{grid}} + p_t^{\text{solar}} = p_t^{\text{class}} + p_t^{\text{base}}$$

$$\forall t \in T$$

Precedence

$$|preca| \sum_{k \in \hat{G}_a} \varepsilon_a^k$$

$$\leq \sum_{\substack{a' \in preca \\ d' \subset d \\ k \in \hat{G}_{a'd'}^r}} \varepsilon_a^k$$

$$\forall a \in A^r, d \in D^r$$

Same for one-off activities
